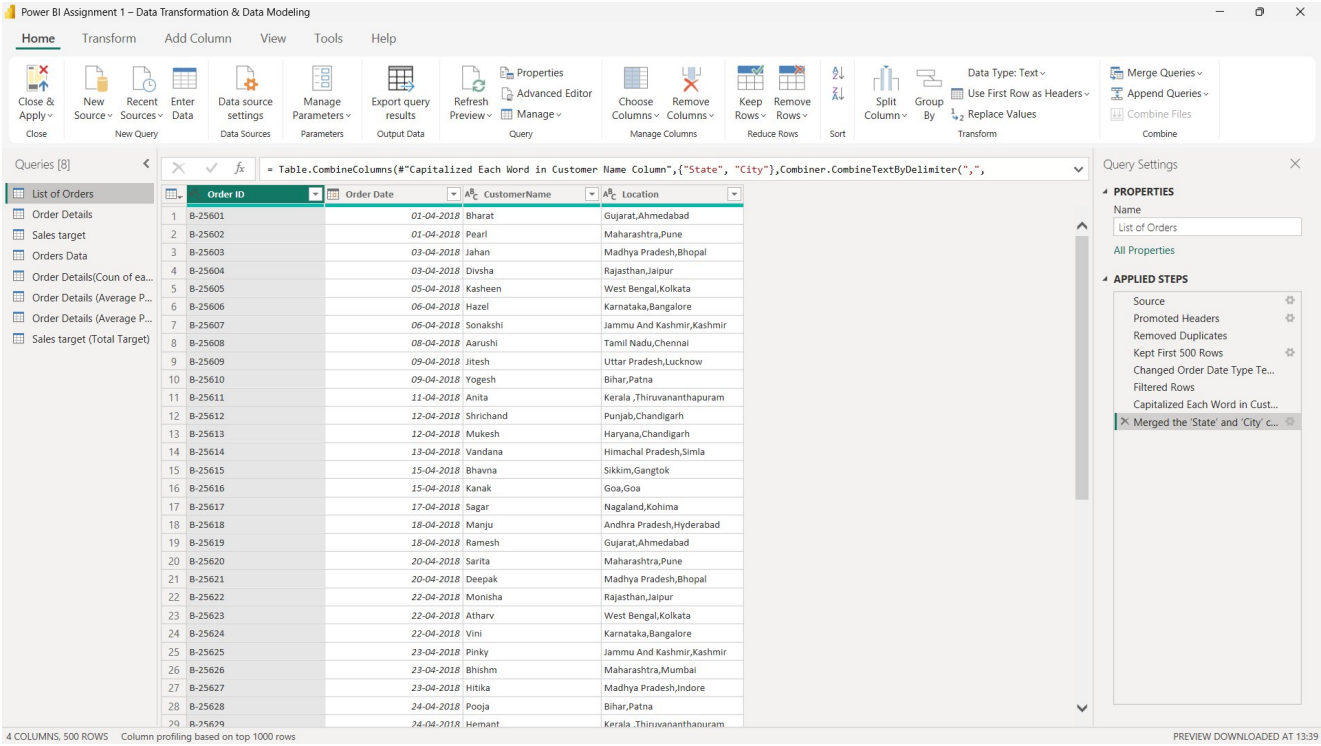
List Of Orders:



As per the instructions, the data was imported from the device, and the **Transform** option was selected to open **Power Query** for data cleaning.

In the **"List of Orders"** table, the following steps were performed:

- Retained the **top 500 rows** using the **Keep Rows** option in the Home tab, as rows beyond 500 contained no valid data.
- Converted the **"Order Date"** column from text to **date format**.
- Standardized the **"Customer Name"** column by applying the **"Capitalize Each Word"** transformation.
- Merged the **"State"** and **"City"** columns into a single column named **"Location"**, separated by a comma.

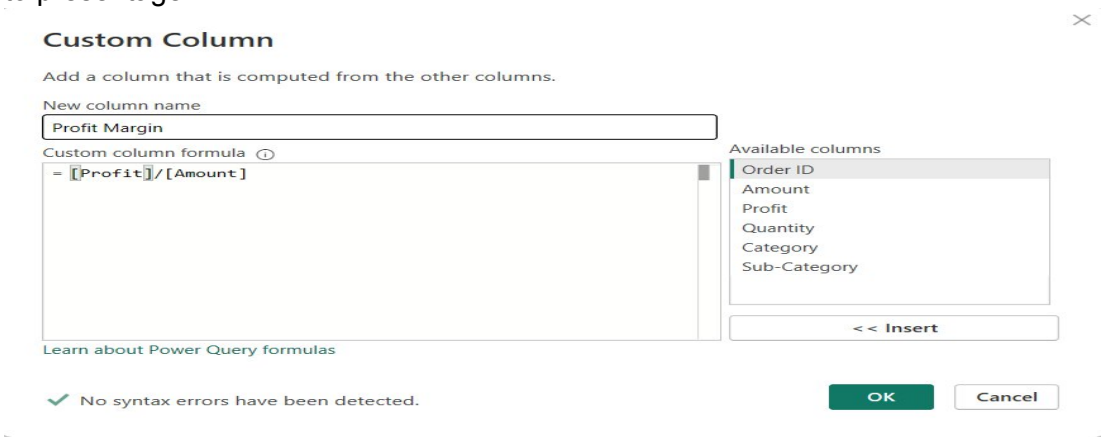
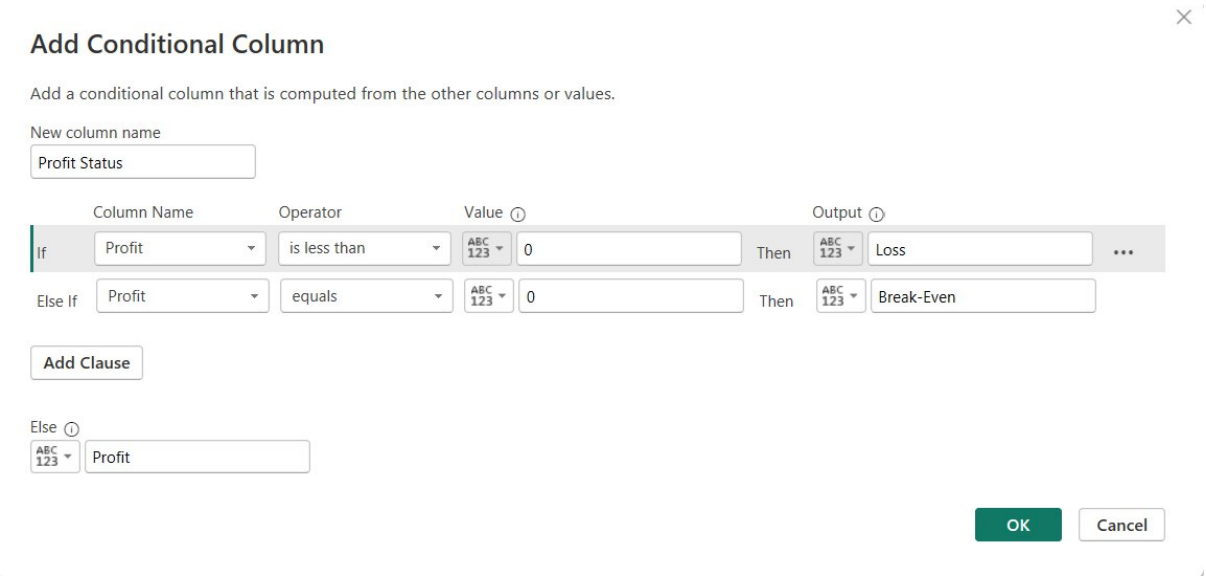
- Converted the **"Amount"** and **"Target"** columns from **Whole Number** to **Fixed Decimal Number** format.
- Reviewed all column data types and corrected them where necessary.
- Added a new column, **"Profit Margin"**, calculated as **Profit ÷ Amount**, and formatted it as a
- to presentage.



Added Conditional Column as Profit Status:



Sorting and Filtering Data:

The **"List of Orders"** and **"Order Details"** tables were merged to create a unified table, **"Orders Data"**, leveraging the **"Order ID"** relationship. Duplicate records were eliminated, and the dataset was refined by applying **sorting and filtering** for **Month** and **Location** (Tamil Nadu, Chennai).

Location wise Filter:

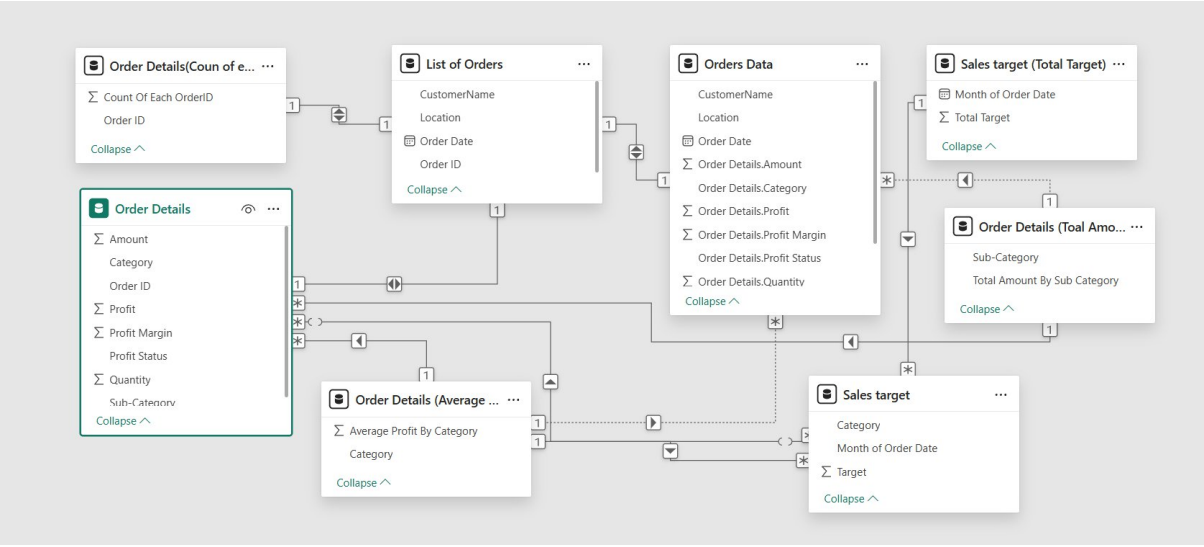
Data Modeling:


- Established a relationship between the “List of Orders” and “Order Details” tables using the ‘Order ID’ column.
- Created a relationship between the “Order Details” and “Sales Target” tables based on the ‘Category’ column, ensuring the relationship is active via Manage Relationships.
